

Caterpillar® And NEWater

The Cat 345CL drives sheet piles into the ground. The Cat 321DL CR working in confined area.

Tractors Singapore's customer, Ley Choon Constructions and Engineering Pte Ltd secures S\$60 million pipeline contract

As Singapore's Public Utilities Board (PUB) prepares for its 5th and largest Changi NEWater plant, targeted to be operational by 2010 and capable of producing 50 million gallons of clean reclaimed water every day, it is also expanding the NEWater network of pipelines, 87km to be exact. 15 of the 20 tenders worth over S\$400 million for the laying of these extended pipelines have already been called.

The network of NEWater pipelines will span Singapore from the new plant in Changi to Jurong, Tuas, Jurong Island and Sentosa, linking up existing NEWater pipeline clusters in Bedok, Seletar, Kranji and Ulu Pandan.

With his reliable and productive fleet of Cat equipment, Mr Toh Choo Huat, CEO of Ley Choon Constructions and Engineering Pte Ltd can rest easy that his company will be able to complete the fast track projects on time. The versatility of Cat hydraulic excavators in pipeline construction jobs allows Ley Choon Constructions to do more than just excavate trenches. The Cat excavators also handle the shoring system, placing bedding material, lifting and precisely lowering the pipes.

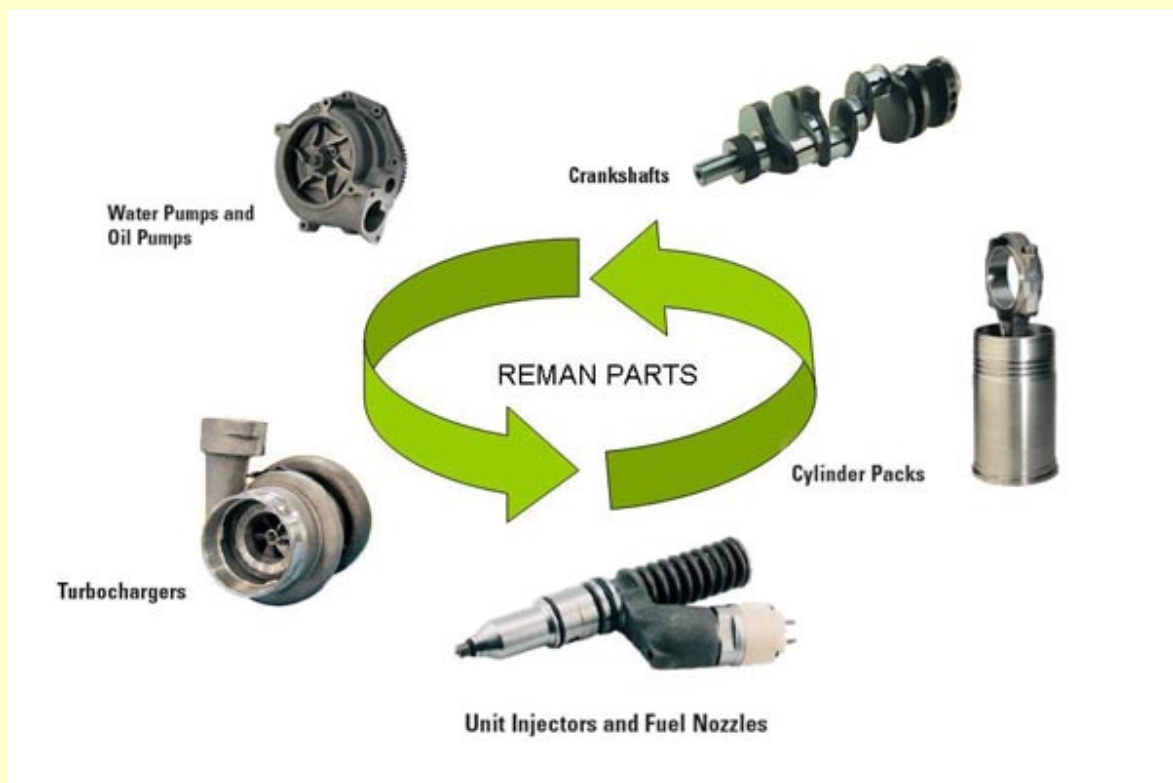

The Cat 321DL CR is excellent for working in confined areas. It is ideal for applications such as utility, urban water and sewerage sectors.

The Caterpillar fleet and applications recommended by TSL's Sales Engineer, Samuel Sum, has left an indelible impression on Mr Toh Choo Huat and Ley Choon Constructions. Mr Toh sees the value of Caterpillar and has

recently placed more orders to add to his growing fleet of Cat equipment which includes 345CL, 330DL, 320D, 321DL CR, 314D CR, 303D CR hydraulic excavators and 950H wheel loaders.

SAVE THE ENVIRONMENT AND YOUR DOLLARS?

Consider
CATERPILLAR® REMANUFACTURED PRODUCTS
As Good As New....As Strong As Ever

What are Cat® Reman Parts?

Cat® Reman Parts are factory remanufactured Caterpillar parts renewed to their to their original specifications, capable of giving the same level of performance as a new part thus giving you good as new performance. The remanufacturing process incorporates the latest engineering design changes, ensuring your remanufactured component meet the latest performance specifications.

Remanufacturing is more extensive than rebuilding. Caterpillar uses state-of-art salvage techniques, adhering to strict guidelines, advanced manufacturing system and unequalled quality control systems to deliver like-new products and exceptional value.

How does the Cat® Reman Parts Program works?

The remanufacturing program is based on an exchanged system whereby you return a used component (core) in exchange for our remanufactured products. Because we are in the business of returning end-of-life components to same-as-new condition, we reduce waste and minimize the need for raw material to produce new parts.

What are the benefits of Cat® Reman Parts?

When your equipment require services...when you need options that allow you to get back to work quickly, affordably, and reliably - our extensive Reman Coverage provides same-as-new performance and reliability at fraction of new cost. What's more? Cat® Reman Parts carry a same-as-new parts warranty.

By reusing much of the original component, remanufacturing conserves most of the energy consumed in the original process, further helping to lower impact caused to the environment at the same time.

Through remanufacturing, Caterpillar makes one of the greatest contributions to sustainable development with lesser impact on the environment...and Tractors Singapore (its authorized dealer for Singapore, Christmas Island and Maldives) is proud to promote it.
