

Cat® ELI™ (Extended Life Inhibitor) is a long-lasting coolant for industrial engines working in environments that do not experience freezing temperatures. Cat ELI uses an active protection technology, similar to Cat ELC™, that avoids the problems experienced with conventional coolants and supplemental coolant additives (SCA) mixed with water. In fact, the organic additives in Cat ELI can target specifically the cooling system surfaces that are susceptible to corrosion. This advanced chemical technology delivers superior protection, improved cooling system efficiency, and has lower impact on the environment.

ELI cannot be used in temperatures below 0 degree C (32 degree F).

Benefits

Lowest your cost

- Uses less coolant: ELI lasts three to six times longer than conventional coolants or commercial supplemental coolant additives (SCA) mixed with water
- Reduces maintenance costs due to less frequent checks of coolant health and less replacement of inhibitors
- Reduces number of coolant drains/ flushes

Lowest your downtime and repair cost

- Superior corrosion protection and effective heat transfer

Superior protection of your coolant system

- Protects aluminum, brass, copper, iron, steel, etc. from pitting and corrosion

Lower impact on the environment

- No glycol in the formula

Conventional SCA

Cat® ELI™

* Or one-half of the coolant service life

** These coolant change intervals are only possible with annual S•O•S™ Level 2 coolant sampling and analysis

Check out our Cat® ELC and ELI Options

| Part No. | Description |
|----------|-----------------------|
| 3658396 | Coolant (18LPail) |
| 3658397 | Coolant (200L Drum) |
| 3658398 | Coolant (1000L Tote) |
| 4692724 | Inhibitor (20L Pail) |
| 4692725 | Inhibitor (210L Drum) |
