

GO GENUINE WITH CAT® FILTERS

No matter when or where Cat® filters are purchased they have the same consistent high quality. Because Cat filters are made better, they provide consistent performance to protect your engine, drive train, and hydraulic systems. While other brands may fit, Cat filters offer the superior quality and protection you need to maximize your engine and other component system's life.

Tractors Singapore

THE DIFFERENCE IS CLEAR

Other brands may fit, but Cat filters protect your engine, drive train and hydraulic systems and components better. Our advanced design delivers maximum filtration efficiency and protection for your equipment. For you, that means more uptime and lower owning and operating costs.

A: No Flexing

Spiral roving eliminates pleat movement and keeps contaminants from working their way into the clean side of the filter. Testing shows filters with spiral roving have 45% lower particle counts than others. Other brands often flex as fluid travels through them, releasing contaminants that can cause wear.

B: No Bunching

Acrylic beads rigidly maintain pleat spacing and maximize the filter's surface area—capturing and holding contaminants until the required change interval. Pleat bunching is common in other brands, allowing contaminants to circulate, cause clogging and shorten filter life.

C: No Metal Contamination

Fiberglass-reinforced nylon center tubes eliminate metal contamination and are 30% stronger than metal tubes, helping prevent collapse during pressure spikes or cold starts. In other brands, metal center tubes often carry metal contaminants left over from manufacturing, which can cause wear.

D: No Gaps

Molded end caps completely seal the clean side from the dirty side, eliminating gaps and keeping contaminants where they belong. Other brands have metal end caps glued on top of filter pleats—creating gaps that allow contaminants to reenter from the clean side.

THE BEST MACHINES DESERVE THE BEST FILTERS

Don't risk your investment by using other filter and fluid brands. Only Cat filters and fluids are developed, tested and approved to the exacting standards of Cat equipment.

AIR FILTERS

Safeguard your equipment and operators from dirt and contaminants.

ENGINE OIL FILTERS

Keep engine parts functioning properly to avoid efficiency loss and failure.

HYDRAULIC & TRANSMISSION FILTERS

Extend hydraulic and power train component life by reducing contamination

FUEL FILTERS

Capture the small particles that do the most damage to engine parts
